

CLAIMS

I claim:

1. An inline skateboard assembly comprising:
a generally planar elongated board;
a plurality of roller sets, each roller set having a plurality of rollers, wherein each roller set is fixedly coupled to an underside of said board to form a line of roller sets to allow said board to move backward and forward along a longitudinal axis of said aligned roller sets.
2. The inline skateboard assembly of claim 1 wherein said rollers of each roller set are aligned to form a single row of rollers.
3. The inline skateboard assembly of claim 2 wherein said longitudinal axis of said aligned roller sets is vertically aligned with a longitudinal axis passing through a center of said board when said roller sets are in a vertical position.
4. The inline skateboard assembly of claim 1, further comprising:
a brake member, said brake member being positioned adjacent to one of said roller sets such that pivoting said board on an outermost roller of said adjacent roller set brings said brake member into contact with a supporting surface to bring said board to a stop using friction between said brake member and the supporting surface.

5. The inline skateboard assembly of claim 1 wherein said board has upwardly turned ends.

6. The inline skateboard assembly of claim 1 wherein said board has a length of about 31 inches and a width of about 8 inches.

7. The inline skateboard assembly of claim 1 wherein said roller sets each have a height to position said board approximately 4 inches above a supporting surface.

8. The inline skateboard assembly of claim 1 wherein said board is substantially octagonal.

9. The inline skateboard assembly of claim 1 wherein said board is constructed of a material chosen from the group of materials consisting of wood, fiberglass, and plastic.

10. The inline skateboard of claim 1 wherein said roller sets have a cumulative total of eight said rollers.

11. The inline skateboard of claim 1 wherein each of said rollers is constructed of polyurethane.

12. The inline skateboard assembly of claim 1 wherein each said roller includes an internal set of ball bearings.
